

## DEPARTMENT OF ENVIRONMENTAL QUALITY

KATHLEEN BABINEAUX BLANCO  
GOVERNOR

MIKE D. McDANIEL, Ph.D.  
SECRETARY

**For Immediate Release**  
July 13, 2007

**Contact:** Jean Kelly  
**Telephone:** 225.219.3966

### **DEQ to conduct water survey on Colyell Creek near Port Vincent**

BATON ROUGE - The Louisiana Department of Environmental Quality will be installing electronic monitoring equipment on July 17, 2007. This equipment will be used in conjunction with a water sampling survey on Colyell Creek/Bay located near Doyle from the headwaters on Ligo Road to the confluence with the Amite River near Port Vincent in Livingston Parish. The survey is being conducted to gather water quality information that will be used to restore and protect the waterbody. The data gathered from the survey will be used to identify suspected pollutants in the bayou that may cause or contribute to low oxygen levels in the water. The survey will end July 19, 2007.

Citizens are asked not to tamper with the equipment that will be mounted on rebar, fenceposts, white PVC poles, or buoys. During the survey, a bright red, non-toxic dye will be injected into the water. Citizens who notice the red coloration of the water should not be alarmed. The waterbody will return to its normal state and color by the end of the day. The dye is used to determine flow and distribution patterns of the bayou. These patterns are used to establish sampling points for the survey and to aid in the development of a total maximum daily load. A TMDL is the maximum amount of a pollutant that can be released into a waterbody without causing it to become impaired and/or violate state water quality standards. TMDLs are used as a basis for establishing wastewater discharge limits.

For further information about the TMDL program and the watershed sampling survey, please contact Kirk Manuel with DEQ at (225) 219-3513 or visit the website at [www.deq.state.la.us/technology/tmdl](http://www.deq.state.la.us/technology/tmdl).
